

A-570-979
Circumvention Inquiry
Thailand 2022
Public Document
E&C/OIV: JDP/PAO

December 1, 2022

MEMORANDUM TO: Lisa W. Wang
Assistant Secretary
for Enforcement and Compliance

FROM: James Maeder
Deputy Assistant Secretary
for Antidumping and Countervailing Duty Operations

SUBJECT: Antidumping and Countervailing Duty Orders on Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, from the People's Republic of China: Preliminary Decision Memorandum for the Circumvention Inquiry With Respect to the Kingdom of Thailand

I. SUMMARY

The U.S. Department of Commerce (Commerce) preliminarily determines that imports of crystalline silicon photovoltaic cells, whether or not assembled into modules (solar cells and modules), from the Kingdom of Thailand (Thailand) are circumventing the antidumping duty (AD) and countervailing duty (CVD) orders on solar cells and modules from the People's Republic of China (China).¹

II. BACKGROUND

On April 1, 2022, Commerce initiated a country-wide circumvention inquiry pursuant to section 781(b) of the Tariff Act of 1930, as amended, (the Act) to determine whether imports of solar cells and/or modules completed or assembled in Thailand using parts and components manufactured in China are circumventing the *Orders*.²

On March 29, 2022, we released entry data from U.S. Customs and Border Protection (CBP) for

¹ See *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules from the People's Republic of China: Amended Final Determination of Sales at Less Than Fair Value, and Antidumping Duty Order*, 77 FR 73018 (December 7, 2012); see also *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, from the People's Republic of China: Countervailing Duty Order*, 77 FR 73017 (December 7, 2012) (collectively, *Orders*).

² See *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, from the People's Republic of China: Initiation of Circumvention Inquiry on the Antidumping Duty and Countervailing Duty Orders*, 87 FR 19071 (April 1, 2022) (*Initiation Notice*), and accompanying Circumvention Initiation Memorandum, at 1.

the period January 1, 2016, through December 31, 2021, to all interested parties under an administrative protective order and invited interested parties to comment on the data.³ We relied on these data, as well as a list of Thai producers of solar cells and/or modules in the request for circumvention inquiries made by Auxin Solar Inc. (Auxin), a member of the U.S. solar industry,⁴ to identify the largest exporters or producers of inquiry merchandise in Thailand. On March 30, 2022, we issued questionnaires to 18 of these companies in which we requested the quantity and value (Q&V) of their sales of solar cells and modules to the United States during calendar years 2016, through 2021, as well as information regarding their sourcing of solar cells and module inputs from China.⁵ We also invited parties to which we did not issue the Q&V questionnaire to respond to it by the deadline for responses.⁶

On April 20 and 21, 2022, we received timely Q&V questionnaire responses from eight companies to which we issued the Q&V questionnaire, one timely response from a company to which we did not issue the Q&V questionnaire, and one untimely response from Sunshine Electrical Energy Co., Ltd.⁷ Seven companies received but did not respond to the Q&V questionnaire, and one Q&V questionnaire was not delivered.⁸ On April 28, 2022, we received comments on respondent selection from Auxin.⁹ We subsequently selected Canadian Solar International Limited (CSIL) and Trina Solar Science & Technology (Thailand) Ltd. (TTL) as the mandatory respondents in this circumvention inquiry¹⁰ and issued circumvention inquiry questionnaires to these companies.¹¹ CSIL¹² and TTL¹³ submitted timely responses to these

²² See Memorandum, “Circumvention Inquiries with Respect to Malaysia, Malaysia, Thailand, and Vietnam - Request for Information,” dated July 14, 2022.

²³ See Auxin’s Letter, “Submission of Investment and Research and Development Information,” dated July 29, 2022.

²⁴ See NextEra’s Letter, “Response to Auxin’s Submission of Investment and Research and Development Information,” dated August 12, 2022.

Between July and October 2022, we issued supplemental questionnaires to CSIL and TTL,²⁵ to which they responded between August and November 2022.²⁶

On August 22, 2022, Commerce extended the deadline for issuing the preliminary determination in this circumvention inquiry by 90 days, until November 28, 2022.²⁷ On November 14, 2022, Commerce further extended this deadline by three days until December 1, 2022.²⁸

III. SCOPE OF THE *ORDERS*

The merchandise covered by the *Orders* is crystalline silicon photovoltaic cells, and modules, laminates, and panels, consisting of crystalline silicon photovoltaic cells, whether or not partially or fully assembled into other products, including, but not limited to, modules, laminates, panels and building integrated materials.

The *Orders* cover crystalline silicon photovoltaic cells of thickness equal to or greater than 20 micrometers, having a p/n junction formed by any means, whether or not the cell has undergone other processing, including, but not limited to, cleaning, etching, coating, and/or addition of materials (including, but not limited to, metallization and conductor patterns) to collect and forward the electricity that is generated by the cell.

Merchandise under consideration may be described at the time of importation as parts for final finished products that are assembled after importation, including, but not limited to, modules, laminates, panels, building-integrated modules, building-integrated panels, or other finished goods kits. Such parts that otherwise meet the definition of merchandise under consideration are included in the scope of the *Orders*.

Excluded from the scope of the *Orders* are thin film photovoltaic products produced from amorphous silicon (a-Si), cadmium telluride (CdTe), or copper indium gallium selenide (CIGS). Also excluded from the scope of the *Orders* are crystalline silicon photovoltaic cells, not exceeding 10,000mm² in surface area, that are permanently integrated into a consumer good whose function is other than power generation and that consumes the electricity generated by the integrated crystalline silicon photovoltaic cell. Where more than one cell is permanently

²⁵ See Commerce's Letters, "First Supplemental Questionnaire," dated July 22 and 27, 2022; "Second Supplemental Questionnaire," dated August 2, 2022; "Third Supplemental Questionnaire," dated September 23, 2022; and "Fourth Supplemental Questionnaire," dated October 24, 2022.

²⁶ See CSIL's Letters, "Response to First Supplemental Questionnaire," dated August 8, 2022 (CSIL 1st SQR); "Response to Second Supplemental Questionnaire," dated August 12, 2022; "Response to Third Supplemental Questionnaire," dated October 7, 2022; and "Response to Fourth Supplemental Questionnaire," dated November 2, 2022; see also TTL's Letters, "First Supplemental Questionnaire Response," dated August 8, 2022 (TTL 1st SQR); "Second Supplemental Questionnaire," dated August 9, 2022; "Third Supplemental Questionnaire," dated October 7, 2022 (TTL 3rd SQR); and "Fourth Supplemental Questionnaire," dated November 2, 2022 (TTL 4th SQR).

²⁷ See Auxin's Letter, "Request for Extension of the Deadline for the Preliminary Determination and the Deadline for Pre-Preliminary Comments," dated August 11, 2022; and Memorandum, "Extension of Preliminary Determinations in Circumvention Inquiries," dated August 22, 2022.

²⁸ See Memorandum, "Second Extension of Preliminary and Final Determinations in Circumvention Inquiries," dated November 14, 2022.

integrated into a consumer good, the surface area for purposes of this exclusion shall be the total combined surface area of all cells that are integrated into the consumer good.

Additionally, excluded from the scope of the *Orders* are panels with surface area from 3,450 mm² to 33,782 mm² with one black wire and one red wire (each of type 22 AWG or 24 AWG not more than 206 mm in length when measured from panel extrusion), and not exceeding 2.9 volts, 1.1 amps, and 3.19 watts. For the purposes of this exclusion, no panel shall contain an internal battery or external computer peripheral ports.

Also excluded from the scope of the *Orders* are:

- 1) Off grid crystalline silicon photovoltaic cells (CSPV) panels in rigid form with a glass cover, with the following characteristics:
 - (A) A total power output of 100 watts or less per panel;
 - (B) a maximum surface area of 8,000 cm² per panel;
 - (C) do not include a built-in inverter;
 - (D) must include a permanently connected wire that terminates in either an 8mm male barrel connector, or a two-port rectangular connector with two pins in square housings of different colors;
 - (E) must include visible parallel grid collector metallic wire lines every 1–4 millimeters across each solar cell; and
 - (F) must be in individual retail packaging (for purposes of this provision, retail packaging typically includes graphics, the product name, its description and/or features, and foam for transport); and

- 2) Off grid CSPV panels without a glass cover, with the following characteristics:
 - (A) A total power output of 100 watts or less per panel;
 - (B) a maximum surface area of 8,000 cm² per panel;
 - (C) do not include a built-in inverter;
 - (D) must include visible parallel grid collector metallic wire lines every 1–4 millimeters across each solar cell; and
 - (E) each panel is
 1. permanently integrated into a consumer good;
 2. encased in a laminated material without stitching, or
 3. has all of the following characteristics: (i) the panel is encased in sewn fabric with visible stitching, (ii) includes a mesh zippered storage pocket, and (iii) includes a permanently attached wire that terminates in a female USB–A connector.

In addition, the following CSPV panels are excluded from the scope of the *Orders*:

- 1) Off-grid CSPV panels in rigid form with a glass cover, with each of the following physical characteristics, whether or not assembled into a fully completed off-grid hydropanel whose function is conversion of water vapor into liquid water:
 - (A) A total power output of no more than 80 watts per panel;

- (B) A surface area of less than 5,000 square centimeters (cm²) per panel;
- (C) Do not include a built-in inverter;
- (D) Do not have a frame around the edges of the panel;
- (E) Include a clear glass back panel; and
- (F) Must include a permanently connected wire that terminates in a two-port rectangular connector.

Modules, laminates, and panels produced in a third country from cells produced in China are covered by the *Orders*; however, modules, laminates, and panels produced in China from cells produced in a third country are not covered by the *Orders*.

Merchandise covered by the *Orders* is currently classified in the Harmonized Tariff Schedule of the United States (HTSUS) under subheadings 8501.71.0000, 8501.72.1000, 8501.72.2000, 8501.72.3000, 8501.72.9000, 8501.80.1000, 8501.80.2000, 8501.80.3000, 8501.80.9000, 8507.20.8010, 8507.20.8031, 8507.20.8041, 8507.20.8061, 8507.20.8091, 8541.42.0010, and 8541.43.0010. These HTSUS subheadings are provided for convenience and customs purposes; the written description of the scope of the *Orders* is dispositive.²⁹

IV. MERCHANDISE SUBJECT TO THE CIRCUMVENTION INQUIRY

This circumvention inquiry covers: (A) crystalline silicon photovoltaic cells that meet the physical description of crystalline silicon photovoltaic cells in the scope of the underlying AD/CVD orders, subject to the exclusions therein, whether or not partially or fully assembled into other products, that were produced in Thailand from wafers produced in China; and (B) modules, laminates, and panels consisting of crystalline silicon photovoltaic cells, subject to the exclusions for certain panels in the scope of the underlying orders, whether or not partially or fully assembled into other products, that were produced in Thailand from wafers produced in China *and* where more than two of the following components in the module/laminate/panel were produced in China: (1) silver paste; (2) aluminum frames (3) glass; (4) backsheets; (5) ethylene vinyl acetate sheets; and (6) junction boxes. If modules, laminates, and panels consisting of crystalline silicon photovoltaic cells do not meet both of the conditions in item (B) above, then this circumvention inquiry does not cover the modules, laminates, and panels, or the crystalline silicon photovoltaic cells within the modules, laminates, and panels, even if those crystalline silicon photovoltaic cells were produced in Thailand from wafers produced in China. Wafers produced outside of China with polysilicon sourced from China are not considered to be wafers produced in China for purposes of this circumvention inquiry.

V. PERIOD OF THE CIRCUMVENTION INQUIRY

The period of the inquiry is January 1, 2008, through December 31, 2021.

²⁹ See *Orders*; see also *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, from the People's Republic of China: Final Results of Changed Circumstances Reviews, and Revocation of Antidumping and Countervailing Duty Orders, in Part*, 86 FR 71616-71617 (December 17, 2021) (excluding certain off-grid CSPV).

VI. NON-MARKET ECONOMY METHODOLOGY FOR VALUING MATERIAL INPUTS FROM CHINA

In this circumvention inquiry, Commerce must determine whether Chinese-produced merchandise that is assembled and completed in a third country and then sold to the United States is circumventing the *Orders*. As part of that analysis, as explained below, section 781(b)(1)(D) of the Act requires Commerce to determine whether the value of the merchandise that is produced in the foreign country to which an order applies, which, in these proceedings, is China, and that is assembled and completed in a third country, is a significant portion of the total value of the final product exported from the third country to the United States.

Commerce considers China to be a non-market economy (NME) country.³⁰ Pursuant to section 771(18) of the Act, “the term “nonmarket economy country” means any foreign country that {Commerce} determines does not operate on market principles of cost or pricing structures” Consequently, valuing the China-produced parts and components for purposes of section 781(b)(1)(D) of the Act falls under the purview of Commerce’s NME methodology, which by statute presumes that NME costs and prices are inherently unreliable and requires Commerce to value Chinese-produced material inputs using surrogate values from one or more market economy countries. While Commerce may use the prices paid for China-produced inputs in market economy proceedings, as noted above, these circumvention inquiries involve AD and CVD orders on China, which is an NME country, and we are attempting to determine whether Chinese-produced merchandise that is completed and assembled in a third country is circumventing those orders.

In accordance with section 773(c)(4) of the Act, Commerce’s NME methodology involves valuing factors of production, including material inputs, to the extent possible, based on the prices or costs in one or more market economy countries that are: (1) at a level of economic development comparable to that of the NME country; and (2) significant producers of comparable merchandise. In this circumvention inquiry, Commerce identified Bulgaria, Chile, Costa Rica, Malaysia, Romania, and Turkey as countries economically comparable to China.³¹

Commerce preliminarily selected Malaysia as the primary surrogate country for valuing Chinese-produced parts and components because record evidence indicates that: (1) Malaysia is at a level of economic development comparable to that of China; (2) Malaysia is a significant producer of merchandise comparable to the merchandise subject to the *Orders*; (3) we have reliable surrogate value data from Malaysia on the record covering nearly all of the parts and components from China that need to be valued (which is not the case for any of the other potential surrogate countries);³² and (4) there is no record evidence calling into question the reliability of the

³⁰ See *Antidumping Duty Investigation of Certain Aluminum Foil from the People’s Republic of China: Affirmative Preliminary Determination of Sales at Less-Than-Fair Value and Postponement of Final Determination*, 82 FR 50858, 50861 (November 2, 2017), and a accompanying Preliminary Decision Memorandum (PDM) (citing Memorandum, “China’s Status as a Non-Market Economy,” dated October 26, 2017), unchanged in *Certain Aluminum Foil From the People’s Republic of China: Final Determination of Sales at Less Than Fair Value*, 83 FR 9282 (March 5, 2018).

³¹ See Request for Comments on Surrogate Countries at Attachment 1.

³² While we selected Malaysia as the primary surrogate country for China, because of unit of measure issues, we used surrogate value data from Romania and Bulgaria to value solar glass.

Malaysian surrogate value data. Therefore, except for solar glass, we calculated the value of Chinese-produced parts and components using Malaysian prices. Specifically, we valued Chinese-produced material inputs using the average unit value of imports into Malaysia during 2021 as reported by Global Trade Atlas.³³

VII. STATUTORY AND REGULATORY FRAMEWORK FOR THE CIRCUMVENTION INQUIRY

Circumvention inquiries are conducted pursuant to section 781 of the Act and 19 CFR 351.226.³⁴ With respect to merchandise assembled or completed in a third country, section 781(b) of the Act provides that Commerce may find circumvention of AD and CVD orders when merchandise imported into the United States was assembled or completed in a foreign country other than the country to which the order applies and the merchandise is of the same class or kind as the merchandise subject to the orders. Section 781(b)(1) of the Act provides that, after taking into account any advice provided by the U.S. International Trade Commission (ITC) under section 781(e) of the Act, Commerce may include imports of merchandise assembled or completed in a third country within the scope of an order at any time the order is in effect if:

- (A) the merchandise imported in the United States is of the same class or kind as any merchandise produced in a foreign country that is the subject of an antidumping and/or countervailing duty order;
- (B) before importation into the United States, such imported merchandise is completed or assembled in another foreign country from merchandise which (i) is subject to such order, or (ii) is produced in the foreign country with respect to which such order applies;
- (C) the process of assembly or completion in the foreign country is minor or insignificant;
- (D) the value of the merchandise produced in the foreign country to which the antidumping and/or countervailing duty order applies is a significant portion of the total value of the merchandise exported to the United States; and
- (E) Commerce determines that action is appropriate to prevent evasion of an order.

In determining whether the process of assembly or completion in a third country is minor or insignificant under section 781(b)(1)(C) of the Act, section 781(b)(2) of the Act directs Commerce to consider:

- (A) the level of investment in the foreign country;

³³ See Memorandum, “Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, from the People’s Republic of China - Circumvention Inquiries with Respect to Cambodia, Malaysia and Thailand: Factor Valuation Memorandum,” dated concurrently with this memorandum.

³⁴ The legislative history to section 781(b) of the Act indicates that Congress intended Commerce to make determinations regarding circumvention on a case-by-case basis, in recognition that the facts of individual cases and the nature of specific industries are widely variable. See S. Rep. No. 103-412 (1994) at 81-82.

- (B) the level of R&D in the foreign country;
- (C) the nature of the production process in the foreign country;
- (D) the extent of production facilities in the foreign country; and
- (E) whether the value of the processing performed in the foreign country represents a small proportion of the value of the merchandise imported into the United States.

No single factor, by itself, controls Commerce's determination of whether the process of assembly or completion in a third country is minor or insignificant.³⁵ Accordingly, it is Commerce's practice to evaluate each of five factors in section 781(b)(2) of the Act, as they exist in the third country, and consider the totality of our analysis of those factors in making a determination.³⁶ The importance of any one of the factors listed under section 781(b)(2) of the Act can vary from case to case based on the particular circumstances unique to each circumvention inquiry.³⁷

Moreover, Commerce's substantial transformation analysis under 19 CFR 351.225(j) and the test for determining whether a product was completed or assembled in other foreign countries under section 781(b) of the Act (19 CFR 351.226(i)) are two distinct analyses used for different purposes. Commerce's substantial transformation analysis is used in scope rulings and other proceedings, to determine a particular product's country-of-origin, while the factors that it considers when determining whether merchandise is being completed or assembled into a product in a third country are specific to a circumvention analysis under section 781 of the Act to determine if the product is circumventing an AD or CVD order. Because these analyses are distinct and serve different purposes, Commerce's application of a substantial transformation analysis does not preclude it from also applying an analysis based on the statutory criteria established in section 781(b) of the Act.³⁸ Additionally, Commerce has noted that "there is nothing contradictory in finding an input to be substantially transformed into a finished product, in terms of its physical characteristics and uses, while also finding the process of effecting that transformation to be minor {vis-à-vis} the manufacturing process of producing a finished product."³⁹

Finally, section 781(b)(3) of the Act sets forth additional factors to consider in determining whether to include merchandise imported into the United States that was assembled or completed

³⁵ See Statement of Administrative Action Accompanying the Uruguay Round Agreements Act, H.R. Doc. No. 103-316, Vol. I (1994) (SAA), at 893.

³⁶ See *Hydrofluorocarbon Blends from the People's Republic of China: Final Negative Scope Ruling on Gujarat Fluorochemicals Ltd.'s R-410A Blend; Affirmative Final Determination of Circumvention of the Antidumping Duty Order by Indian Blends Containing Chinese Components*, 85 FR 61930 (October 1, 2020) (*HFC Blends from China*), and accompanying Issues and Decision Memorandum (IDM), at 20.

³⁷ *Id.*

³⁸ See *Bell Supply Co., LLC v. United States*, 888 F.3d 1222, 1231 (Fed. Cir. 2018) ("{E}ven where an article is substantially transformed, Commerce can still find that it is subject to an AD or CVD order after conducting a circumvention inquiry.").

³⁹ See *Regulations To Improve Administration and Enforcement of Antidumping and Countervailing Duty Laws*, 86 FR 52300, 52343 (September 20, 2021).

in a third country within the scope of an AD and/or CVD order. Specifically, Commerce shall take into account such factors as:

- (A) the pattern of trade, including sourcing patterns;
- (B) whether the manufacturer or exporter of the subject merchandise, or the merchandise produced in the order country, that is completed or assembled in a third country, is affiliated with the person who performs the completion or assembly in order to produce the merchandise that is subsequently imported into the United States; and
- (C) whether imports into the third country of the merchandise that is completed or assembled in the third country, have increased after the initiation of the investigation that resulted in the issuance of an order.

VIII. USE OF FACTS AVAILABLE WITH ADVERSE INFERENCES

As noted above, Commerce received timely responses to its Q&V questionnaire from only eight of the 16 companies which received the Q&V questionnaire. With respect to the eight companies that failed to timely respond to the Q&V questionnaire,⁴⁰ for the reasons explained below, Commerce is preliminarily basing its circumvention analysis on the facts available, pursuant to sections 776(a)(2)(A)-(C) of the Act, with an adverse inference (adverse facts available or AFA), pursuant to section 776(b) of the Act.

A. Legal Standard

Section 776(a)(1) and 776(a)(2) of the Act provide that Commerce shall, subject to section 782(d) of the Act, apply facts otherwise available in reaching the applicable determination if necessary information is not on the record, or if an interested party: (A) withholds information requested by Commerce; (B) fails to provide such information by the deadlines for submission of the information, or in the form and manner requested, subject to subsections (c)(1) and (e) of section 782 of the Act; (C) significantly impedes a proceeding; or (D) provides such information but the information cannot be verified as provided in section 782(i) of the Act.

Section 782(c)(1) of the Act states that Commerce shall consider the ability of an interested party to provide information upon a prompt notification by that party that it is unable to submit the information in the form and manner required, and that party also provides a full explanation of the difficulty and suggests an alternative form in which the party is able to provide the information. Section 782(e) of the Act states further that Commerce shall not decline to consider submitted information if all of the following requirements are met: (1) the information is submitted by the established deadline; (2) the information can be verified; (3) the information is not so incomplete that it cannot serve as a reliable basis for reaching the applicable determination; (4) the interested party has demonstrated that it acted to the best of its ability; and (5) the information can be used without undue difficulties.

⁴⁰ See Appendix I under “Companies That Failed to Respond to the Q&V Questionnaire” for a list of these companies.

Section 776(b) of the Act provides that, if Commerce finds that an interested party has failed to cooperate by not acting to the best of its ability to comply with a request for information, Commerce may use an inference that is adverse to the interests of that party in selecting from among the facts otherwise available.⁴¹ In addition, the SAA explains that Commerce may employ an adverse inference “to ensure that the party does not obtain a more favorable result by failing to cooperate than if it had cooperated fully.”⁴² The U.S. Court of Appeals for the Federal Circuit, in *Nippon Steel*, explained that the ordinary meaning of “best” means “one’s maximum effort,” and that the statutory mandate that a respondent act to the “best of its ability” requires the respondent to do the maximum it is able to do.⁴³ Furthermore, affirmative evidence of bad faith on the part of a respondent is not required before Commerce may make an adverse inference.⁴⁴ It is Commerce’s practice to consider, in employing adverse inferences, the extent to which a party may benefit from its own lack of cooperation.⁴⁵

B. Use of Facts Available with an Adverse Inference for Non-Responsive Companies

With respect to the eight companies that failed to timely respond to the Q&V questionnaire,⁴⁶ Commerce is preliminarily basing its circumvention analysis on the facts available, pursuant to sections 776(a)(2)(A)-(C) of the Act, because these companies withheld information requested by Commerce, failed to provide timely information in the form and manner requested, and significantly impeded this circumvention inquiry. Furthermore, Commerce preliminarily determines that, by failing to provide the requested information, the non-responsive companies did not cooperate to the best of their abilities to comply with a request for information in these inquiries.⁴⁷ The non-responsive companies neither indicated that they were having difficulty providing the requested information, nor did they suggest alternative forms for submitting the information. Because the non-responsive companies failed to cooperate to the best of their abilities, Commerce preliminarily determines, in accordance with section 776(b) of the Act, that an adverse inference is warranted, in selecting from among the facts otherwise available, when analyzing the circumvention criteria below with respect to these uncooperative companies.

As AFA, we preliminarily find that the non-responsive companies produced and/or exported solar cells and modules subject to these inquiries and, as explained below, that the criteria for finding circumvention with respect to these companies have been met. In addition, as part of our application of AFA, we preliminarily determine that the non-cooperative companies listed in the appendix to this memorandum are not eligible to certify that specific entries of merchandise were

⁴¹ See 19 CFR 351.308(a).

⁴⁷ See *Nippon Steel*, 337 F.3d at 1383-84.

not manufactured using certain components produced in China.⁴⁸ See the “Certification” section below and the accompanying *Federal Register* notice for details regarding certifications. The non-cooperative companies must comply with the cash deposit requirements in the accompanying *Federal Register* notice.

IX. STATUTORY ANALYSIS FOR THE CIRCUMVENTION INQUIRY

Section 781(b) of the Act directs Commerce to consider the criteria described in the “Statutory and Regulatory Framework for the Circumvention Inquiry” section of this memorandum above, to determine whether merchandise completed or assembled in a third country is circumventing an order. Below we analyze those statutory criteria based on record evidence.

Merchandise of the Same Class or Kind

Section 781(b)(1) of the Act provides that Commerce may include imports of merchandise assembled or completed in a third country within the scope of an order at any time the order is in effect if, among other things, the merchandise imported in the United States is of the same class or kind as any merchandise produced in a foreign country that is the subject of an AD and/or CVD order.

CSIL reported that it is a trading company that exported solar modules to the United States during the inquiry period that were produced by Canadian Solar Manufacturing (Thailand) Co., Ltd. (THSM), and that the solar modules are of the same class or kind as the class or kind of solar cells and modules subject to the *Orders*.⁴⁹ THSM and CSIL are owned by Canadian Solar Inc.

TTL reported that it produced and exported, to the United States, solar modules during the inquiry period that are of the same class or kind as the class or kind of solar cells and modules subject to the *Orders*.⁵⁰

With respect to the non-responsive companies listed in the appendix to this memorandum, as AFA (*see* section VII of this memorandum above), we have determined that these companies exported inquiry merchandise to the United States of the same class or kind as the class or kind of solar cells and modules subject to the *Orders*.

Based on the foregoing, in accordance with section 781(b)(1)(A) of the Act, we find that the available information indicates that inquiry merchandise imported into the United States from Thailand is of the same class or kind as the class or kind of merchandise subject to the *Orders*.

⁴⁸ See, e.g., *Anti-Circumvention Inquiry of the Antidumping Duty Order on Certain Pasta from Italy: Affirmative Preliminary Determination of Circumvention of the Antidumping Duty Order*, 63 FR 18364, 18366 (April 15, 1998), unchanged in *Anti-Circumvention Inquiry of the Antidumping Duty Order on Certain Pasta from Italy: Affirmative Final Determination of Circumvention of the Antidumping Duty Order*, 63 FR 54672, 54675-76 (October 13, 1998).

⁴⁹ See CSIL IQR Part II at Exhibit II-7.

⁵⁰ See TTL IQR Part II at Exhibit 6.

Whether, Before Importation into the United States, Such Merchandise is Completed or Assembled in Thailand from Merchandise that is Subject to the *Order* or Produced in China

Section 781(b)(1) of the Act provides that Commerce may include imports of merchandise assembled or completed in a third country within the scope of an order at any time the order is in effect if, among other things, before importation into the United States, such imported merchandise is completed or assembled in another foreign country from merchandise which: (i) is subject to such order, or (ii) is produced in the foreign country with respect to which such order applies.

CSIL reported that during the inquiry period, THSM produced solar cells and modules from wafers and other raw materials produced in China.⁵¹ In addition, CSIL provided sample documentation demonstrating how THSM determined the country of origin for the parts/components purchased during the inquiry period.⁵² Thus, record evidence indicates that THSM completed or assembled Chinese parts and components in Thailand to produce the merchandise that was subsequently imported into the United States.

TTL reported that during the inquiry period, it produced solar cells and modules from wafers and other raw materials produced in China.⁵³ In addition, TTL provided sample documentation demonstrating how it determined the country of origin for the parts/components purchased during the inquiry period.⁵⁴ Thus, record evidence indicates that TTL completed or assembled Chinese parts and components in Thailand to produce the merchandise that was subsequently imported into the United States.

With respect to the non-responsive companies listed in the appendix to this memorandum, as AFA (*see* section VII of this memorandum above), we have determined that these companies also completed or assembled Chinese parts and components in Thailand to produce the merchandise that was subsequently imported into the United States.

Thus, record evidence, in conjunction with our preliminary AFA determination with respect to the non-responsive companies, support a preliminary determination, in accordance with section 781(b)(1)(B) of the Act, that solar cells and modules imported into the United States were completed or assembled in Thailand from merchandise (*i.e.*, silicon wafers and other materials) produced in China.

Whether the Process of Assembly or Completion in Thailand is Minor or Insignificant

Section 781(b)(1) of the Act provides that Commerce may include imports of merchandise assembled or completed in a third country within the scope of an order at any time the order is in effect if, among other things, the process of assembly or completion in the third country is minor or insignificant.

⁵¹ See CSIL IQR Part II at 11 and 16.

⁵² *Id.* at Exhibit II-12-C; *see also* CSIL 1st SQR at 6-10 and Exhibit S1-8-A.

⁵³ See TTL IQR Part II at 6 and 10.

⁵⁴ *Id.* at 10-12 and Exhibit 11; *see also* TTL 1st SQR at 4.

Under section 781(b)(2) of the Act, Commerce considers five factors to determine whether the process of assembly or completion of merchandise in a foreign country is minor or insignificant: (1) the level of investment in the foreign country in which the merchandise is completed or assembled; (2) the level of research and development in the foreign country in which the merchandise is completed or assembled; (3) the nature of the production process in the foreign country in which the merchandise is completed or assembled; (4) the extent of production facilities in the foreign country in which the merchandise is completed or assembled; and (5) whether the value of the processing performed in the foreign country in which the merchandise is completed or assembled represents a small proportion of the value of the merchandise imported into the United States.

The SAA explains that no single factor listed in section 781(b)(2) of the Act will be controlling.⁵⁵ Accordingly, Commerce's practice is to evaluate each of the factors in section 781(b)(2) of the Act as it exists in the third country and consider the totality of our analysis of those factors in making a determination.⁵⁶ The importance of any one of the factors listed under section 781(b)(2) of the Act can vary from case to case depending on the particular circumstances unique to each circumvention inquiry.

In this inquiry, Commerce based its analysis on both qualitative and quantitative factors in determining whether the process of assembly or completion in Thailand is minor or insignificant, in accordance with the criteria of section 781(b)(2) of the Act. This approach is consistent with our analysis in prior circumvention inquiries.⁵⁷ Additionally, in evaluating these factors, we compared the production of inquiry merchandise by the Thailand respondents to that of the respondents' affiliated producers in China.

As discussed in detail below, Commerce preliminarily finds that the process of assembly or completion of inquiry merchandise is minor or insignificant for CSIL and TTL, and based on AFA, minor or insignificant for the non-responsive companies listed in the appendix to this memorandum. With respect to the mandatory respondents, much of the information used to determine whether the process of assembly or completion in Thailand is minor or insignificant is business proprietary in nature; therefore, where necessary, we discussed this information in company-specific preliminary analysis memoranda.⁵⁸

⁵⁵ See SAA at 893.

⁵⁶ See *HFC Blends from China* IDM at 20.

⁵⁷ See *Anti-Circumvention Inquiry of the Antidumping and Countervailing Duty Orders on Certain Pasta from Italy: Affirmative Preliminary Determination of Circumvention of Antidumping and Countervailing Duty Orders*, 68 FR 46571, 46575 (August 6, 2003), unchanged in *Anti-Circumvention Inquiry of the Antidumping and Countervailing Duty Orders on Certain Pasta from Italy: Affirmative Final Determinations of Circumvention of Antidumping and Countervailing Duty Orders*, 68 FR 54888 (September 19, 2003); see also *Certain Corrosion-Resistant Steel Products from the People's Republic of China: Affirmative Preliminary Determination of Circumvention Involving the United Arab Emirates*, 85 FR 8841 (February 18, 2020), unchanged in *Certain Corrosion-Resistant Steel Products from the People's Republic of China: Affirmative Final Determination of Circumvention Involving the United Arab Emirates*, 85 FR 41957 (July 13, 2020) (*CORE from China*).

⁵⁸ See Memoranda, "Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, from the People's Republic from China – Circumvention Inquiry with Respect to Thailand: Preliminary Analysis

(1) Level of Investment in Thailand

THSM, which produced CSIL's solar cells and modules in Thailand, was established in September 2016 and began producing solar cells and modules in Thailand in 2017. We compared the total investment reported by CSIL that was required to construct and start up THSM's solar cells and module production facilities, to the total investment reported by CSIL that was required to construct and start up its Chinese affiliates' wafer and ingot production facilities.⁵⁹ We preliminarily find that CSIL/THSM's level of investment in Thailand is not minor or insignificant compared to the level of investment of its affiliates in China, and thus, weighs against finding circumvention. For a complete analysis of CSIL/THSM's levels of investments, *see* the CSIL Preliminary Analysis Memorandum.⁶⁰

TTL was established in April 2015 and began producing solar cells and modules in Thailand in December 2015.⁶¹ We compared the total investment reported by TTL that was required to construct and start up its solar cells and module production facilities, to the total investment reported by TTL that was required to construct and start up its Chinese affiliates' wafer production facilities.⁶² We preliminarily find that TTL's level of investment in Thailand is not minor or insignificant, compared to the level of investment of its affiliates in China, and thus, weighs against finding of circumvention. For a complete analysis of TTL's levels of investments, *see* the TTL Preliminary Analysis Memorandum.⁶³

With respect to the non-responsive companies listed in the appendix to this memorandum, as AFA (*see* section VII of this memorandum above), we have determined that these companies' levels of investment in Thailand are minor relative to their levels of investment in China, which weighs in favor of finding circumvention.

(2) Level of Research and Development in Thailand

CSIL reported that it incurred R&D expenses in Thailand related to producing solar cells and modules, and its affiliates in China incurred R&D expenses related to producing ingots, and wafers.⁶⁴ We preliminarily find that CSIL's R&D expenses in Thailand are minor or insignificant compared to its affiliates' R&D expenses in China related to producing ingots and wafers, and thus, weighs in favor of finding circumvention. For a complete analysis of CSIL's level of R&D expenses in Thailand, *see* the CSIL Preliminary Analysis Memorandum.

Memorandum for Canadian Solar International Limited," dated concurrently with this memorandum (CSIL Preliminary Analysis Memorandum); and "Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, from the People's Republic of China – Circumvention Inquiry with Respect to Thailand: Preliminary Analysis Memorandum for Trina Solar Science & Technology (Thailand) Ltd.," dated concurrently with this memorandum (TTL Preliminary Analysis Memorandum).

⁵⁹ *See* CSIL 1st SQR at Exhibits S1-6-A and S1-6-B.

⁶⁰ *See* CSIL Preliminary Analysis Memorandum.

⁶¹ *See* TTL IQR Part I at 5.

⁶² *See* TTL 4th SQR at Exhibit 5. For details regarding TTL's affiliates' production in China, *see* the proprietary version of the TTL Preliminary Analysis Memorandum.

⁶³ *See* TTL Preliminary Analysis Memorandum.

⁶⁴ *See* CSIL 1st SQR at Exhibits S1-1-A and S1-1-B.

TTL reported that from 2019 through 2021, it did not incur any R&D expenses in Thailand related to producing solar cells and solar modules,⁶⁵ but that its affiliates in China did incur R&D expenses related to producing wafers.⁶⁶ We preliminarily find this fact pattern weighs in favor of finding circumvention. For a complete analysis of R&D expenses with respect to TTL, *see* the TTL Preliminary Analysis Memorandum.

With respect to the non-responsive companies listed in the appendix to this memorandum, as AFA (*see* section VII of this memorandum above), we have determined that these companies' levels of R&D expenses in Thailand are minor relative to their levels of R&D expenses in China, which weighs in favor of finding circumvention.

(3) Nature of the Production Process in Thailand

Because the respondents treated certain production processes as business proprietary information,⁶⁷ we did not associate the production processes described below with a particular respondent. However, we find our all-inclusive description of the production processes below covers the range of production scenarios applicable to various respondents and covers the comparisons required to reach a determination with respect to the nature of production.

According to the ITC, to produce ingots, polysilicon rocks are placed into a quartz crucible along with a small amount of boron, which is used to provide a positive electric orientation. The crucible is then heated in a furnace to approximately 2,500 degrees Fahrenheit to produce monocrystalline silicon, currently the most common form of polysilicon used in producing solar cells. Once the polysilicon is melted, a seed crystal is lowered into the material and rotated, with the crucible rotated in the opposite direction. The melt starts to solidify on the seed and the seed is slowly raised out of the melt—creating a single long crystal. The crystal is then cooled before it is moved onto the next step. The process of growing the crystal takes approximately 2.5 days.⁶⁸

To produce wafers, the top and tail of the ingot are cut off and the remaining portion is cut into equal length pieces and then squared. A wire saw is used to slice the ingots into wafers. Typically, diamond wire saws are used for monocrystalline wafer slicing. The wafers are then cleaned, dried, and inspected.⁶⁹

Solar cell production typically involves phosphorus being diffused into a thin layer on the wafer surface at high heat, which gives the surface of the wafer its negative potential electrical orientation. The combination of that layer, and a boron-doped layer below, creates the positive-negative (p/n), junction. A thin layer of silicon is removed from the edge of the solar cell to separate the positive and negative layers. A silicon nitride antireflective coating is then added to

⁶⁵ *See* TTL 1st SQR at Exhibit 1.

⁶⁶ *Id.* For details regarding TTL's affiliates' production in China, *see* the TTL Preliminary Analysis Memorandum.

⁶⁷ In the preliminary analysis memorandum for each respondent, we identified the inputs that the respondent's Chinese affiliates produced/provided.

⁶⁸ *See Crystalline Silicon Photovoltaic Cells, Whether or Not Partially or Fully Assembled Into Other Products: Monitoring Developments in the Domestic Industry*, Investigation No. TA-201-075 (Monitoring), Publication 5021 (February 2020), at I-62.

⁶⁹ *Id.* at I-64.

the solar cell to increase the absorption of sunlight and metals are printed on the solar cell to collect electricity. Aluminum and silver layers are applied, and then the solar cell is placed in a furnace, where the high temperature causes the silver paste to become imbedded in the surface of the silicon layer, forming a reliable electrical contact. The final step in the process is testing and sorting the solar cells based on their characteristics and efficiency.⁷⁰

To assemble solar cells into solar modules, a piece of glass is placed on the production line, and EVA or another encapsulant is placed on top of the glass. Then a group of solar cells is placed in a line and soldered together, creating a string. The strings are then placed on top of the encapsulant, and the string interconnections are soldered together. After this, another layer of EVA and a backsheet are added, and the product is laminated and cured. Usually a frame is added, and a junction box is attached to the back of the module.⁷¹

As noted above, the process for producing monocrystalline silicon ingots requires melting polysilicon then forming the crystal and pulling it into an ingot. These processes utilize extremely expensive furnaces that consume enormous amounts of electricity,⁷² and despite the few steps, it typically takes approximately four days to grow an ingot from raw polysilicon.⁷³ The diamond saws that are used to slice ingots into thinner than paper wafers are also expensive and technologically advanced. In a market survey, Bloomberg NEF, a prominent research provider for the solar industry, found that:

“{w}afer factories required high upfront capital expenditure and bear many technical hurdles, which makes it difficult for new factories to be built outside of China.”⁷⁴

Technical hurdles are highest for plants that make polysilicon and wafers. These plants are also costly to build and take longest to construct. Cell and module factories can be built faster and can respond quicker to technological trends and policy developments like import tariffs.⁷⁵

Thus, the process in China for producing ingots and wafers requires significant technological expertise. Meanwhile, record evidence indicates that the labor demands of ingot and wafer production are slightly less than the labor required to produce solar cells and modules.⁷⁶

However, relative to ingot and wafer production, solar cell and module production involves a greater number of stages, each requiring a high level of technological sophistication. Specifically, the process for turning wafers into solar cells requires an expensive, multi-stage assembly line

⁷⁰ *Id.* at I-65 to I-66.

⁷¹ *Id.* at I-67.

⁷² See Memorandum, “Meeting with the Department of Energy,” dated June 3, 2022, at Attachment 2 (containing *Solar Photovoltaics: Supply Chain Deep Dive Assessment. U.S. Department of Energy Response to Executive Order 14017, “America’s Supply Chains,”* dated July 29, 2022 (*DOE Solar Report*), at 31).

⁷³ *Id.* at 29.

⁷⁴ See Circumvention Request at Exhibit 4 (“Solar PV Trade and Manufacturing: A Deep Dive February 2021, BloombergNEF,” dated February 2021, at “Executive Summary”).

⁷⁵ *Id.* at PDF page 15.

⁷⁶ See *DOE Solar Report* at 12.

requiring high-technological machinery and workers with strong technological knowledge. While ingot and wafer production require large amounts of upfront capital and technical capabilities, the ITC found solar cell production to be the “most capital intensive part of the manufacturing process,” and “a highly automated, capital intensive, and technologically sophisticated process, requiring skilled technicians and employees with advanced degrees.”⁷⁷

Moreover, module production also involves a large number of varied inputs consumed in a complex, multi-step production process that requires precision, highly skilled workers, and accurate quality-testing equipment at multiple stages.⁷⁸ Furthermore, the physical transformation of polysilicon rocks into wafers (*i.e.*, the portion of the production process occurring in China) is less extensive than the transformation of wafers into solar modules (*i.e.*, the portion of the production process occurring in third countries).⁷⁹ Only a handful of inputs are used to convert polysilicon rocks into wafers, whereas converting a solar cell into a solar module requires approximately 100 different inputs.

Additionally, Commerce previously noted that cell production is where the essence of a solar module is realized. Specifically, Commerce noted that:

once a wafer is doped and an opposite electrical orientation is imparted on the surface, it results in the creation of a p/n junction. When sunlight strikes the cell, the positive and negative charge carriers are released, causing electrical current to flow. It is at this point that the cell is capable of generating electricity from sunlight.⁸⁰

Therefore, Commerce has determined that it is only when the p/n junction is created that a wafer is no longer just a wafer, but is a solar cell that is subject to the *Orders*.⁸¹ Commerce also noted in the underlying investigation that, “{t}he essential component of solar modules/panels is the solar cell since the purpose of solar modules/panels is to convert sunlight into electricity and this process occurs in the solar cells.”⁸²

⁷⁷ See *Crystalline Silicon Photovoltaic Cells and Modules from China, Inv. Nos. 701-TA-481 and 731-TA-1190* (Final), USITC Pub. No. 4360 (November 2012), at I-18.

⁷⁸ See Auxin’s Letter, “Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules from the People’s Republic of China: Submission of Investment and Research and Development Information,” dated July 29, 2022, at Exhibit 1.

⁷⁹ For example, a typical solar module requires 72 wafers to produce a solar module. Further, the weight of 72 wafers is approximately 0.72 grams, while a module weighs approximately 20 kilograms (kg); thus, the nature of the resulting solar modules is 30,000 times heavier than the original input into the process.

⁸⁰ See NextEra’s Letter, “Pre-Preliminary Determination Comments,” dated October 20, 2022, at Attachment 22 (Memorandum, “Antidumping and Countervailing Duty Orders on Crystalline Silicon Photovoltaic Cells from the People’s Republic of China, and Certain Crystalline Silicon Photovoltaic Products from Taiwan: The Solaria Corporation Scope Ruling (A-570-979, C-570-980, A-583-853),” dated April 8, 2021, at 10-11.)

⁸¹ See NextEra’s Letter, “Request to Reject Anti-Circumvention Ruling Requests and to Decline Initiation,” dated September 15, 2021, at Attachment 14 (citing the Memorandum, “SunSpark Technology Inc. Scope Ruling,” dated October 23, 2020, at 6).

⁸² See NextEra’s Letter, “Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules, from the People’s Republic of China: NextEra Comments on Auxin’s Circumvention Ruling Request,” dated May 2, 2022, at 14-15 (citing Memorandum, “Scope Clarification Memorandum,” dated March 19, 2012, at 6).

Moreover, if we disregarded the polysilicon-to-ingot part of the production process in China and started with the production of wafers from ingots in China, the relative proportion of the production process that takes place in the third country when producing solar cells and modules from wafers would be even greater compared to the production in China. Thus, we find that the nature of the production performed by the respondents in the third country is not minor or insignificant compared to either processing polysilicon into wafers, or ingots into wafers, in China, which does not weigh in favor of finding circumvention.

(4) Extent of Production Facilities in Thailand

CSIL and TTL provided information regarding the square footage of, the number of production workers employed in, and the capacity of, their Thai solar cell and module production facilities and the facilities of their affiliated wafer and/or ingot producers in China. We preliminarily find that the extent of CSIL and TTL's production facilities in Thailand compared to the extent of their affiliates' production facilities in China, does not support a finding of minor or insignificant assembly or completion in Thailand and thus, weighs against finding circumvention. For a complete analysis of the extent of their production facilities, *see* the CSIL and TTL Preliminary Analysis Memoranda.

With respect to the non-responsive companies listed in the appendix to this memorandum, as AFA (*see* section VII of this memorandum above), we have determined that the extent of their production facilities in Thailand are minor relative to the extent of their production facilities, if any, in China, and thus, weighs in favor of finding circumvention.

(5) Whether the Value of Processing in Thailand Represents a Small Proportion of the Value of the Merchandise Imported into the United States

To determine the percentage of the value of imported inquiry merchandise represented by third country processing, we summed the per-unit costs incurred in the third country by each mandatory respondent for non-Chinese material inputs, labor, fixed and variable overhead, selling, general, and administrative items, and interest and divided the sum by the per-unit weighted-average value of the respondent's U.S. sales of inquiry merchandise during the inquiry period. Based on our calculations, we preliminarily find that the value of the processing performed in Thailand by CSIL is a small proportion of the value of the inquiry merchandise imported into the United States, and thus, weighs in favor of finding circumvention. However, we preliminarily find that the value of processing performed by TTL in Thailand is not a small proportion of the value of the inquiry merchandise imported into the United States, and thus, weighs against finding circumvention. For a complete analysis of the value of processing in Thailand, *see* the CSIL and TTL Preliminary Analysis Memoranda.

With respect to the non-responsive companies listed in the appendix to this memorandum, as AFA (*see* section VII of this memorandum above), we have determined that the value of their processing performed in Thailand is a small proportion of the value of the inquiry merchandise imported into the United States, which weighs in favor of finding circumvention.

Whether the Value of the Merchandise Produced in China is a Significant Portion of the Total Value of the Merchandise Exported to the United States

Section 781(b)(1) of the Act provides that Commerce may include imports of merchandise assembled or completed in a third country within the scope of an order at any time the order is in effect if, among other things, the value of the merchandise produced in the foreign country to which the AD and/or CVD order applies is a significant portion of the total value of the merchandise exported to the United States.

To determine the percentage of the value of exported inquiry merchandise represented by the parts and components produced in China that were used to produce the merchandise, for each respondent we summed the per-unit value of each Chinese part and component and divided the sum by the per-unit weighted-average value of the respondent's U.S. sales of inquiry merchandise during the inquiry period. Because China is an NME country, we valued the parts and components produced in China using surrogate values. Based on our calculations, we preliminarily find that the value of the merchandise produced in China that was used by CSIL and TTL to produce inquiry merchandise is a significant portion of the total value of the merchandise exported to the United States, and thus, weighs in favor of finding circumvention. For a complete analysis of the value of the merchandise produced in China, *see* the CSIL and TTL Preliminary Analysis Memoranda.

With respect to the non-responsive companies listed in the appendix to this memorandum, as AFA (*see* section VII of this memorandum above), we have determined that the percentage of the value of exported inquiry merchandise represented by the parts and components produced in China that were used to produce the merchandise is a significant proportion of the value of the inquiry merchandise exported to the United States, and thus, weighs in favor of finding circumvention.

Other Factors to Consider

Section 781(b)(3) of the Act directs Commerce to consider additional factors in determining whether to include merchandise assembled or completed in a foreign country within the scope of an order, such as:

(A) the pattern of trade, including sourcing patterns; (B) whether the manufacturer or exporter of the merchandise ... is affiliated with the person who uses the merchandise ... to assemble or complete in the foreign country the merchandise that is subsequently imported into the United States; and (C) whether imports into the foreign country of the merchandise ... have increased after the initiation of the investigation which resulted in the issuance of such order.

(1) Pattern of Trade and Sourcing Patterns

We analyzed patterns of trade by comparing publicly available U.S. import statistics for imports of solar cells and solar modules from 2011 (the year of initiation of the investigations which

resulted in the *Orders*) to 2021.⁸³ Based on U.S. import data, the value of U.S. imports of solar cells and solar modules from Thailand dramatically increased during this period, from \$336,420 in 2011 to \$1,142,641,657 in 2021 (*i.e.*, an increase of over 300,000 percent). In contrast, the value of U.S. imports of solar cells and solar modules from China significantly decreased during this period, from \$2,803,830,639 in 2011 to \$21,320,358 in 2021 (*i.e.*, a decrease of more than 99 percent). This pattern of trade indicates a shift in exports of solar cells and solar modules to the United States from China to Thailand, and thus, weighs in favor of finding circumvention.⁸⁴

We also analyzed patterns of trade with respect to the mandatory respondents. Each of the mandatory respondents reported the value and volume of its, and its Chinese affiliates', shipments of solar cells and solar modules to customers in the domestic market, the U.S. market, and other third country markets from 2008 through 2021. The data provided by CSIL and TTL indicate a pattern of trade that weighs in favor of finding circumvention. For a complete analysis of the patterns of trade with respect to the mandatory respondents, *see* the CSIL and TTL Preliminary Analysis Memoranda.

With respect to the non-responsive companies listed in the appendix to this memorandum, as AFA (*see* section VII of this memorandum above), we have determined that the patterns in trade noted above weigh in favor of finding circumvention for these companies.

(2) Affiliation

Generally, Commerce considers circumvention to be more likely to occur when the manufacturer of the subject merchandise or of inputs from the order country that are completed or assembled in a third country is affiliated with the entity in the third country that performs the completion or assembly. As described above, in analyzing the “minor or insignificant” factors in section 781(b)(2) of the Act, we found that certain of the selected respondents sourced parts and components from affiliated suppliers. These affiliations are described in more detail below.

TTL is a subsidiary of Trina Solar Co., Ltd. (which is in China), and is part of the Trina Group, which includes Chinese producers of solar cells, solar modules, and inputs used to manufacture solar cells and solar modules. During the inquiry period, TTL was affiliated with entities in China that provided parts and components used by TTL to produce solar cells and solar modules. Thus, TTL's affiliations weigh in favor of finding circumvention.

⁸³ We obtained publicly-available U.S. import data from the Global Trade Atlas for Harmonized Tariff Schedule (HTS) subheadings 8541.40.6020 (“Solar Cells Assembled Into Modules Or Panels”) and 8541.40.6030 (“Solar Cells, Not Assembled Into Modules Or Made Up Into Panels”) for 2011 through 2018, and HTS subheadings 8541.40.6015 (“Solar Cells, Crystalline Silicon Photovoltaic Cells Of A Kind Described In Stat Note 11 To This Chapter, Assembled Into Modules Or Panels”) and 8541.40.6025 (“Solar Cells, Crystalline Silicon Photovoltaic Cells Of A Kind Described In Stat Note 11 To This Chapter, Neso”) for 2018 through 2021.

⁸⁴ *See, e.g., CORE from China; see also Certain Uncoated Paper from Brazil: Affirmative Preliminary Determination of Circumvention of the Antidumping Duty Order for Uncoated Paper Rolls*, 86 FR 7261 (January 27, 2021), unchanged in *Certain Uncoated Paper from Brazil, the People's Republic of China, and Indonesia: Affirmative Final Determinations of Circumvention of the Antidumping Duty Orders and Countervailing Duty Orders for Certain Uncoated Paper Roll*, 86 FR 71025 (December 14, 2021); and *Oil Country Tubular Goods from the People's Republic of China: Preliminary Affirmative Determinations of Circumvention*, 86 FR 43627 (August 10, 2021), unchanged in *Oil Country Tubular Goods from the People's Republic of China: Final Affirmative Determinations of Circumvention*, 86 FR 67443 (November 26, 2021).

CSIL is a subsidiary of Canadian Solar Inc. (legally domiciled and incorporated in Canada) and is part of the Canadian Solar Group, which includes Chinese producers of solar cells, solar modules and inputs used to manufacture solar cells and modules. During the inquiry period, CSIL was affiliated with entities in China that provided parts and components used by CSIL to produce solar cells and solar modules. Thus, CSIL's affiliations weigh in favor of finding circumvention.

For a complete analysis of affiliations, *see* the CSIL and TTL Preliminary Analysis Memoranda.

With respect to the non-responsive companies listed in the appendix to this memorandum, as AFA (*see* section VII of this memorandum above), we determine that these companies have affiliates in China and that these affiliations weigh in favor of finding circumvention for these companies.

(3) Whether Shipments of Inputs from China to the Third Country Increased

To determine whether shipments of the inputs from China that were used to complete or assemble the final product in the third country increased, we examined the mandatory respondents' purchases of Chinese-produced inputs from 2008 to 2021 that they used to manufacture solar cells/modules. CSIL and TTL reported purchasing wafers and other parts and components from China which they used to manufacture solar cells/modules. Proprietary information indicates that purchases of such inputs increased since initiation of the investigations that resulted in the *Orders*, which weighs in favor of finding circumvention.⁸⁵

With respect to the non-responsive companies listed in the appendix to this memorandum, as AFA (*see* section VII of this memorandum above), we determine that they purchased inputs from China and that their purchases of inputs from China weigh in favor of finding circumvention for these companies.

X. SUMMARY OF STATUTORY ANALYSIS

As discussed above, to make an affirmative determination of circumvention, all the criteria under section 781(b)(1) of the Act must be satisfied, taking into account the factors listed under section 781(b)(2) of the Act for determining whether completion or assembly in the third country is minor or insignificant. Moreover, pursuant to section 781(b)(3) of the Act, in determining whether to include merchandise assembled or completed in a foreign country within the scope of an order, Commerce must take into account such factors as the pattern of trade, including sourcing patterns, affiliations, and whether imports into the foreign country of the merchandise described in section 781(b)(1)(B) of the Act have increased after initiation of the investigation that results in the order.

Pursuant to section 781(b)(1)(A) and (B) of the Act, Commerce preliminarily finds that the inquiry merchandise imported into the United States is within the same class or kind of merchandise as the class or kind of merchandise subject to the *Orders* and that this merchandise is being completed and assembled, in part, from parts and components produced in China, the country with respect to which the applicable *Orders* apply.

⁸⁵ For Commerce's full analysis, including business proprietary information, *see* the CSIL and TTL Preliminary Analysis Memoranda.

Based on the factors listed under section 781(b)(2) of the Act, pursuant to section 781(b)(1)(C) of the Act, Commerce preliminarily finds that the production of inquiry merchandise in Thailand is minor or insignificant for CSIL and TTL. Given the uniquely complex nature of solar cell and module production, we give particular importance to the level of CSIL and TTL's R&D in Thailand.⁸⁶ Therefore, despite the findings noted above regarding the nature and extent of the production process and the level of investment in Thailand for solar cells and modules, we preliminarily find that the totality of the factors indicates the process of assembly or completion in Thailand is minor and insignificant.⁸⁷

Furthermore, based on AFA, Commerce preliminarily finds that the production of inquiry merchandise in Thailand is minor or insignificant for the non-responsive companies listed in the appendix to this memorandum.

Pursuant to section 781(b)(1)(D) of the Act, Commerce preliminarily finds that the value of the merchandise produced in China that was used to produce inquiry merchandise is a significant portion of the total value of the merchandise exported from Thailand to the United States for CSIL and TTL, and based on AFA, the non-responsive companies listed in the appendix to this memorandum.

Concerning the three factors under section 781(b)(3) of the Act (*i.e.*, pattern of trade and sourcing, affiliations, and whether imports of parts and components from China increased), Commerce preliminarily finds that each of these factors supports a preliminary affirmative determination of circumvention for CSIL and TTL, and based on AFA, the non-responsive companies listed in the appendix to this memorandum.

Based on an analysis of the totality of the information on the record of these circumvention inquiries related to CSIL and TTL, we preliminarily find that CSIL and TTL are circumventing the *Orders* in accordance with section 781(b) of the Act. Additionally, based on AFA, we preliminarily find that the non-responsive firms listed the appendix to this memorandum are circumventing the *Orders* in accordance with section 781(b) of the Act.

Furthermore, upon taking into consideration section 781(b)(3) of the Act, we also have preliminarily determined that action is warranted to prevent evasion of the *Orders* pursuant to section 781(b)(1)(E) of the Act.

XI. VERIFICATION

As provided by 19 CFR 351.226(f)(3), Commerce intends to verify the information relied upon in making this preliminary determination.

⁸⁶ See SAA at 893 (“Commerce will evaluate each of these factors as they exist either in the United States or a third country, depending on the particular circumvention scenario. No single factor will be controlling.”).

⁸⁷ See *Uncovered Innerspring Units From the People's Republic of China: Affirmative Preliminary Determination of Circumvention of the Antidumping Duty Order*, 78 FR 41784 (July 11, 2013).

XII. CERTIFICATION PROCESS AND COUNTRY-WIDE AFFIRMATIVE DETERMINATION OF CIRCUMVENTION

As noted above, Commerce identified the universe of potential producers of solar cells and modules in, and exporters of solar cells and modules from, Thailand using CBP import data. We then issued Q&V questionnaires to certain companies, invited all other companies to respond to the Q&V questionnaire, and selected, as mandatory respondents, companies that exported the largest quantity of solar cells and modules to the United States from Thailand based on information reported in response to the Q&V questionnaire. Under 19 CFR 351.226(m)(1), Commerce is authorized, based on available evidence, to take the appropriate remedy to address circumvention and prevent evasion of an order, including the application of a determination on a country-wide basis. Commerce found that CSIL and TTL are circumventing the orders on solar cells and modules from China. Additionally, because certain companies failed to respond to the Q&V questionnaire, and thus, failed to cooperate by not acting to the best of their abilities to respond to a request for information, as AFA, we preliminarily conclude that these companies produced solar cells and modules subject to these circumvention inquiries. CSIL, TTL, and the AFA companies account for a significant volume of solar cells and modules exported from Thailand to the United States.⁸⁸ Because Commerce was unable to examine all Thai producers of solar cells and modules, Commerce determines that a country-wide determination is most appropriate to prevent further circumvention of the orders by non-examined producers of inquiry merchandise in Thailand. Therefore, Commerce is applying this preliminary affirmative determination of circumvention to all shipments of inquiry merchandise from Thailand on or after April 1, 2022, the date of publication of the *Initiation Notice*.

In order to administer this preliminary country-wide affirmative determination of circumvention, and to implement the Proclamation described below, Commerce has established the following types of certifications: (1) importer and exporter certifications that specific entries meet the regulatory definition of “Applicable Entries”; and (2) importer and exporter certifications that specific entries of inquiry merchandise are not subject to suspension of liquidation or the collection of cash deposits pursuant to this preliminary country-wide affirmative determination of circumvention because the merchandise was not manufactured using certain components produced in China. For copies of each type of certification and information regarding the certification requirements, *see* the accompanying *Federal Register* notice.

Accordingly, companies that were not individually examined can certify whether their products are subject to suspension of liquidation or the collection of cash deposits based on the requirements and process described in the accompanying *Federal Register* notice.

XIII. PRESIDENTIAL PROCLAMATION

On June 6, 2022, the President of the United States signed Proclamation 10414, “Declaration of Emergency and Authorization for Temporary Extensions of Time and Duty-Free Importation of Solar Cells and Modules from Southeast Asia” (the Proclamation). In the Proclamation, the President directed the Secretary of Commerce (the Secretary) to:

⁸⁸ *See* CBP Data Release Memorandum; *see also* TTL Preliminary Analysis Memorandum at Attachments VII and VIII; and CSIL Preliminary Analysis Memorandum at Attachment VIII.

consider taking appropriate action under section 1318(a) of title 19, United States Code, to permit, until 24 months after the date of this proclamation or until the emergency declared herein has terminated, whichever occurs first, under such regulations and under such conditions as the Secretary may prescribe, the importation, free of the collection of duties and estimated duties, if applicable, under sections 1671, 1673, 1675, and 1677j of title 19, United States Code, {(sections 701, 731, 751 and 781 of the Act)} of certain solar cells and modules exported from the Kingdom of Cambodia, Malaysia, the Kingdom of Thailand, and the Socialist Republic of Vietnam, and that are not already subject to an antidumping or countervailing duty order as of the date of this proclamation ...⁸⁹

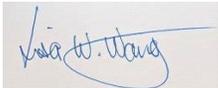

On September 12, 2022, Commerce added Part 362 to its regulations to implement the Proclamation. Pursuant to 19 CFR 362.103(b)(1)(i), Commerce will direct CBP to discontinue the suspension of liquidation and collection of cash deposits that were ordered based on Commerce’s initiation of this circumvention inquiry. In addition, pursuant to 19 CFR 362.103(b)(1)(ii) and (iii), Commerce will not direct CBP to suspend liquidation of, and require cash deposits of estimated ADs and CVDs based on this affirmative preliminary determination of circumvention for, any “Applicable Entries.” However, Commerce will direct CBP to suspend liquidation of, and collect cash deposits of estimated ADs and CVDs based on this affirmative preliminary determination of circumvention for, imports of Southeast Asian-completed solar cells and solar modules that are not “Applicable Entries.” For further information regarding these regulations and the definition of “Applicable Entries” see the accompanying *Federal Register* notice.

XV. RECOMMENDATION

We recommend finding, pursuant to 781(b) of the Act, that imports of solar cells and modules, completed in Thailand using certain parts and components manufactured in China, are circumventing the *Orders*.

Agree

Disagree

APPENDIX - Thailand

Companies to Whom Commerce Issued a Q&V Questionnaire

1. Canadian Solar Manufacturing
2. Jinko Solar
3. Talesun Technologies Thailand
4. Trina Solar and Science
5. Solar PPM
6. Zhongli Talesun
7. Tiger Solar Co., Ltd.
8. MLT Solar Energy Product Ltd.
9. Celestica (Thailand) Limited
10. Gintech Limited
11. Light & Hope
12. Green Solar Thailand Co., Ltd.
13. G_Star Energy Co., Ltd.
14. Lightup Creation CO., Ltd.
15. Sunshine Electrical Energy Co., Ltd.
16. Thai Master Frame Co., Ltd.
17. Three Arrows (Thailand) Co., Ltd.
18. Yuan Feng New Energy

Companies That Failed to Respond to the Q&V Questionnaire

1. Celestica (Thailand) Limited
2. Green Solar Thailand Co., Ltd.
3. Lightup Creation CO., Ltd.
4. Thai Master Frame Co., Ltd.
5. Three Arrows (Thailand) Co., Ltd.
6. Yuan Feng New Energy
7. Solar PPM.
8. Sunshine Electrical Energy Co., Ltd.

Company to Which the Q&V Questionnaire Was Not Delivered

1. G_Star Energy Co., Ltd.
